Fast solutions to the HEIGHT PROBLEMS

Our engineering department is comprised of engineers with several years of experience in the scaffolding sector. They work with the latest CAD programs to provide solutions to your height problems. Our scaffolding complies with the most stringent global standards.

They are manufactured without any type of welding and made according to a special process of cold deformation. Alufase offers top quality scaffolding created from the best European raw materials such as lightweight aluminum alloy, Finnish birch plywood, and tempered die cast aluminum.

All of our products have a 10 year warranty against manufacturer defects and each tube is individually tested. We have a large stock to fit all of your scaffolding needs.

Thanks to the more than 30 years of experience as an aluminum scaffolding rental company, Alufase distributes top quality products and parts that are both durable and reliable.

Training and installations

At Alufase, we have a team of engineers in charge of providing training and monitoring of all our operators. We carry out courses in safety during scaffolding assembly and dismantling and in the handling of mobile elevating work platforms. We also do courses in working at a height. Our courses are given by technicians who account for more than 10 years of experience in the use and handling of this kind of work equipment.

Engineering, quality and hazard prevention

We have put our experienced team of engineers at your service for over 30 years, offering technical counsel and implementing studies of the needs of each of our clients. We issue certificates of assembly and perform periodical revisions. We can also elaborate assembly plans and approved projects for any type of job requested by the client.
